FreshMart Basket Case: Project Plan

Trips are up **6.8%** but average basket size is down **10%**.
We will uncover why and deliver 3 actionable recommendations.

DELIVERABLES

Written report: 8–15 pages

Presentation deck: 10–15 slides + 10-minute talk

Supporting Python notebook for analysis

KEY MILESTONES

M1
Fri 30 Oct
Problem statement and hypothesis list

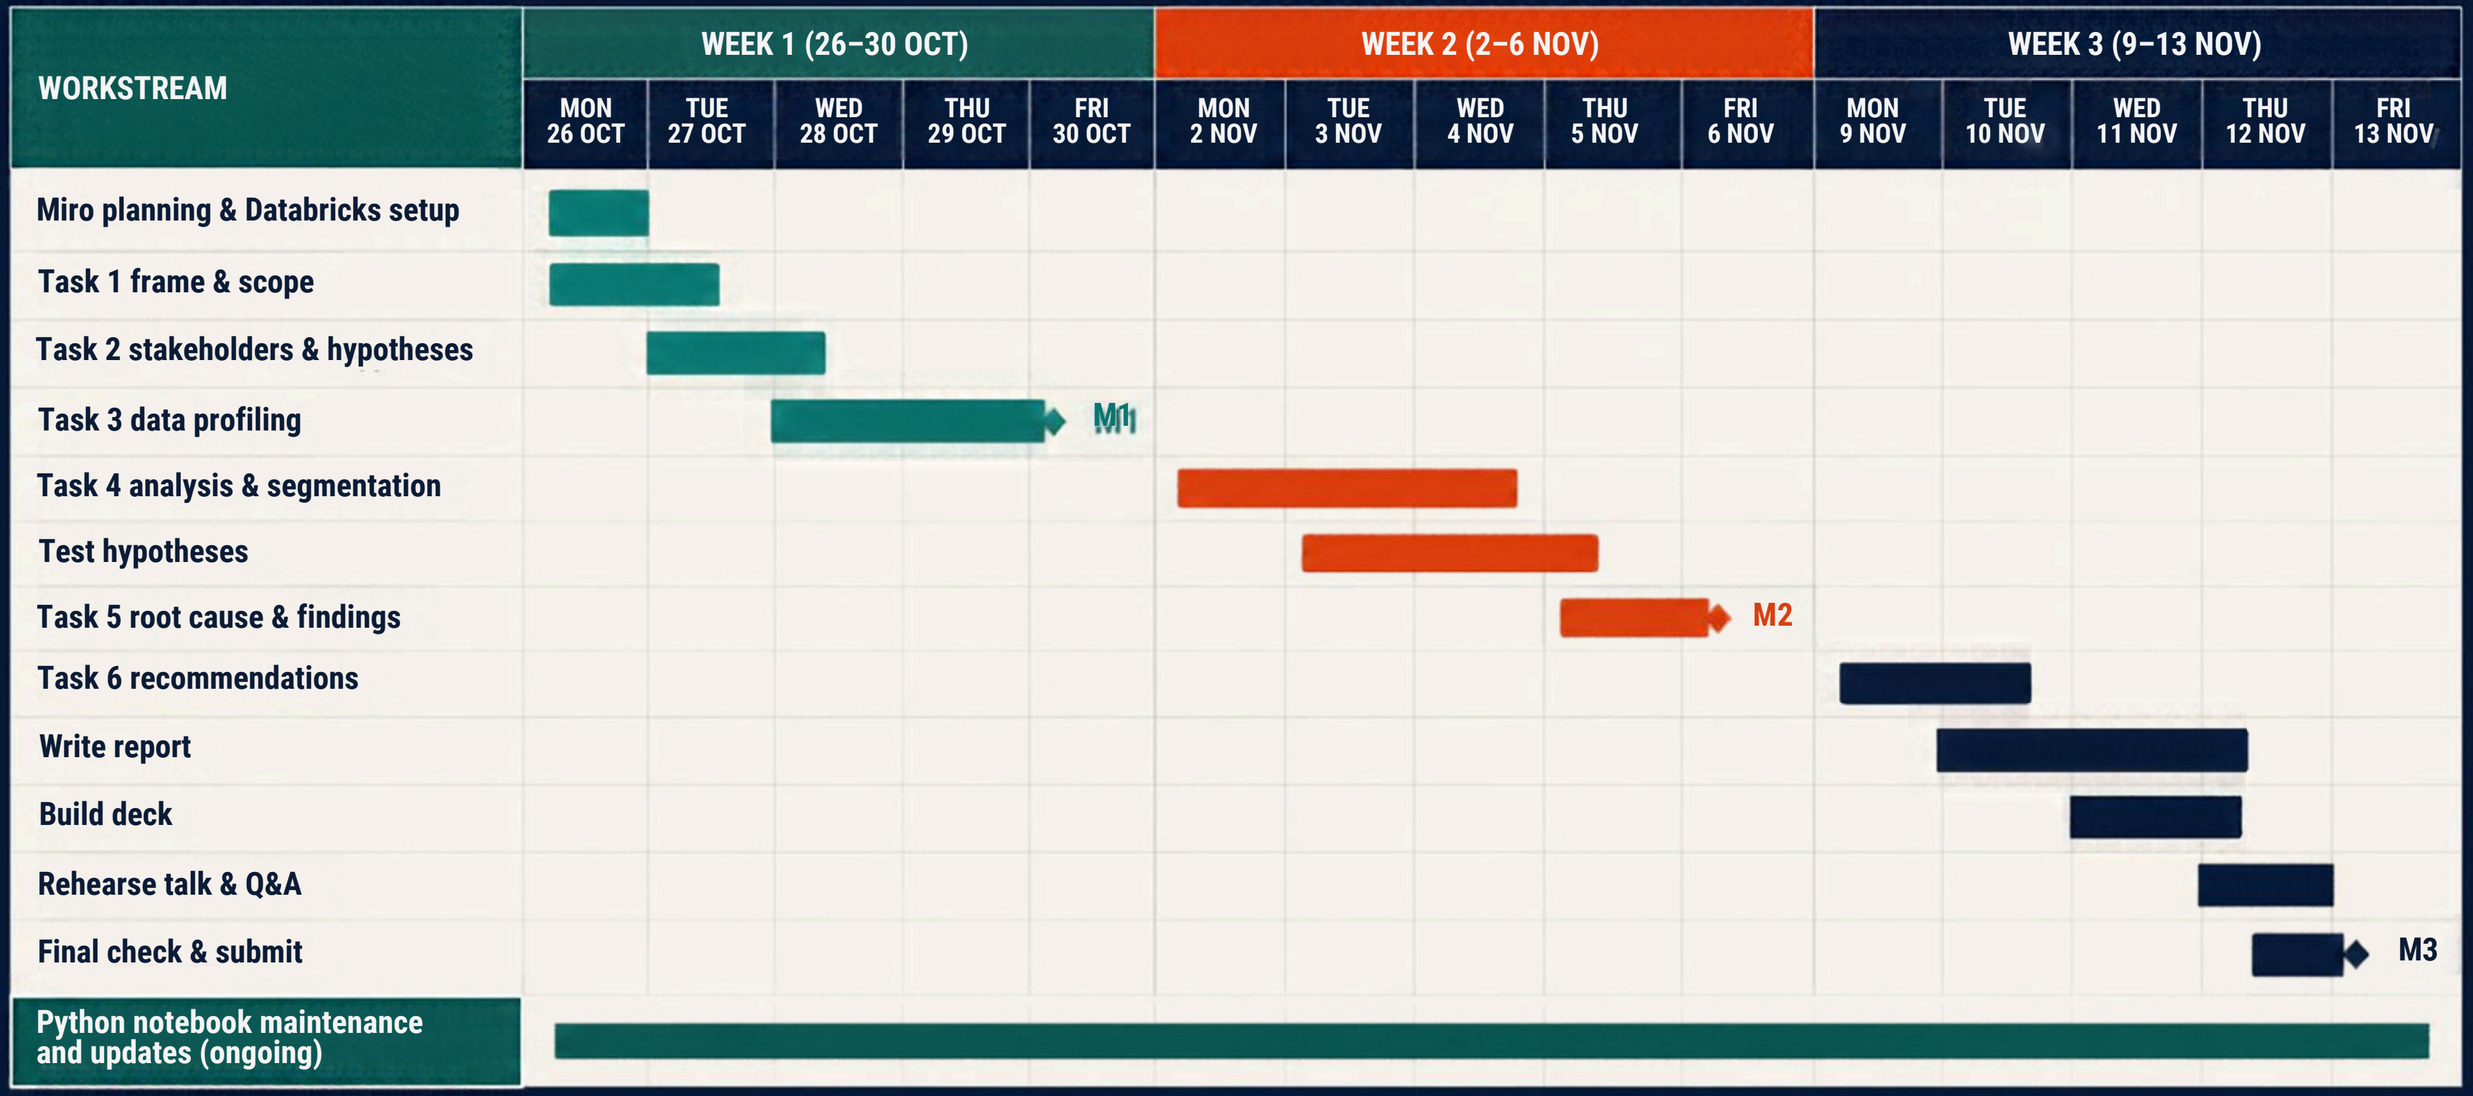

M2
Fri 6 Nov
Draft findings with key charts

M3
Fri 13 Nov
Submit report, deck, notebook, then present

Project Timeline

15 working days across 3 weeks

Weekly Work Plan

Three weeks. Clear focus. Measurable outputs.

WEEK 1 — Frame, hypothesis, prepare data

OUTPUT

One-page hproblem statement
hypothesis list
data quality log

- Define scope and key metrics
- Identify stakeholders and generate hypotheses
- Profile data and check quality; create derived fields

WEEK 2 — Analyse and find the cause

OUTPUT

Draft findings with key charts
hypothesis scorecard

- Segment data by trend, trip mix, loyalty, format, province
- Test hypotheses comparing competitor and control stores, stockouts
- Accept or reject hypothesisss, identify root causes

WEEK 3 — Recommend, write and present

OUTPUT

Final report
presentation deck
Python notebook

- Develop actionable recommendations, success metrics, monitoring plan
- Write detailed report and build polished slide deck
- Rehearse 10-minute talk and Q&A preparation

Risks and Quality Checks

RISKS AND MITIGATIONS

01 **Loyalty IDs rarely repeat**

Limitation acknowledged; we will rely on trip-mix analysis for behavioural patterns.

02 **Scope creep with too many charts**

One idea per slide; focus on the story first, then choose the right chart.

03 **Running out of time for deck**

Start the deck by Wed Week 3; rehearse to a tight 10 minutes.

04 **Average hides segments**

Always split the data before drawing any conclusions.

QUALITY CHECKLIST

01 Every number traces to the Python notebook.

02 Every chart includes a “so what?” title explaining the insight.

03 Rejected hypotheses are clearly named.

04 Recommendations specify owner, effort, and success metric.
